Empowering Healthcare

Team Covenant,

As you are all aware IV Fluids are becoming increasingly difficult to get. This is not a reflection of McKesson but rather a direct result from what is taking place with the Manufacturers of the fluids in the current marketplace. In the US we source fluids from all of the manufacturers of these products; Covenant has an agreement with BBraun for their IV Fluid and when BBraun is not able to supply your complete need for Fluids, we substitute with Baxter and Hospira. This however continues to become much more difficult because of the following issues in the market place.

BRAUN RELATED:

Braun allocation reduction:

- *Due to numerous manufacturing related setbacks, Braun has reduced allocations*
- *Allocations have been reduced by 25% (some items were impacted higher – manufacturer product codes L8000, L8001, L8002 and L7500)*
- *Braun's criteria for the reduction was based on eligibility vs non-eligibility. "Eligible" customers as defined by Braun are those customers who meet a purchase requirement for Braun's full suite of products (i.e. Extension sets, admin sets, adapters, catheters, etc.)*
 - *This impacts both Acute and Non-Acute.*
- *There are 4 items (L8000, L8001, L8002 and L7500) that are being reduced an additional 25% to eligible customers (non-eligible customer were removed entirely)*
- *McKesson is using Braun's allocation and eligibility list. Please contact your B. Braun or McKesson Account Executive should you request additional details*

BAXTER RELATED:

Baxter has a manufacturing site in Puerto Rico that was impacted by hurricane Maria

- *Effective immediately Baxter is pulling 34 items from ALL distribution (Acute, Alt Site, and Pharma).*
- *Baxter will ship product direct to customers to maintain better controls of inventory.*
- *We have discontinued all items in our system to prevent backorder from being generated.*
- *Customers should call Baxter @ 1-888-229-0001 to try and order product directly.*
- *Return to distribution date unknown*
- *IV Sets also are going on allocation (impact still being assessed); cross reference and alternate items being evaluated.*

In addition, Baxter is allocating IV sets although this has little to zero effect on Covenant altogether.

Fortunately many of you haven't seen a reduction in your usage. This is because when I see the orders you place I am spending a significant portion of my day making sure that you do not experience any lapse in your fluids because I know how critical they are to your operation. However this is getting near impossible as we are simply not receiving the fluids we need to supply your needs.

So what can we do? Many of you already do not hang fluids for your patients because of shortages that we have all been experiencing and are going with a Hep-Lock or a Saline Lock. Attached is a list of these products should you decide to go with this clinical alternative to hanging a bag of IV Solution. And here is what BBraun has suggested be used for this process.

Dear Valued B. Braun Customer,

B. Braun Medical Inc. has been and continues to be focused on increasing the availability of sterile IV solutions that are critical for patient care. As demand for these products has increased, we've been investing in equipment upgrades, improved processes, and a new manufacturing location to introduce new supply to the marketplace.

Throughout 2017, we have been planning for a plant shutdown to do critical maintenance work at the end of the year. However, unplanned production interruptions have resulted in significant decreases in supply of product necessary to meet current demands of our customers. The December shutdown will further strain our inventory levels.

Some customers have already experienced backorders, and we anticipate that this situation will continue through the first quarter of 2018. We are doing our best to anticipate customer needs and maximize production output.

Given our current and anticipated supply situation, we advise you to immediately start sourcing a portion of your product demand from alternative manufacturers for all PAB® (SVP) and the following four Excel® codes (L7500, L8000, L8001 and L8002) through the first quarter of 2018. Starting with the October allocation period, allocations will be adjusted as needed and the final percentage will be communicated by your sales representative. Please reference the list of affected products on the following page.

We are diligently working to resolve the causes of the current production interruptions and are prioritizing production based on our inventory and distributor inventory levels. Improvements are expected over the next several months, but we do not anticipate that this will fully support our customer demand in the short term.

We understand the disruption that this has on our customers and sincerely apologize. With patient care as the top priority for both of us, we will be communicating to you on a regular basis to provide you with timely information as we work through this difficult time.

We are confident that our long-term investments in expanded production facilities will result in equally long-term benefits. We appreciate your support and want you to know that we are dedicated to you, your patients and the healthcare industry.

Information regarding drug products that are experiencing supply disruptions in the US is communicated by manufacturers to the FDA and posted on the FDA web page. For specific information regarding drug supply issues, please refer to the following link: <https://www.fda.gov/Drugs/DrugSafety/DrugShortages>.

Sincerely,

Tom Sutton
Vice President, Marketing

Subject: Hurricane Maria Update

Dear Valued Baxter Customer,

We're writing to provide an update regarding the impact to our facilities from Hurricane Maria.

Baxter is doing everything possible to minimize any disruption of service to your facility and to ensure a consistent supply of product for the patients you serve.

- Shipments to the US were maximized prior to Hurricane Maria.
- Damage from Hurricane Maria to Baxter's manufacturing and distribution facilities is being assessed.
- Production and distribution will resume as soon as possible.
- Baxter will maximize distribution by air shipping to speed recovery.

To help sustain the supply of existing inventory from the Caribbean region, Baxter is placing the products, listed on the following pages, on a protective allocation effective immediately.

- Customers will be allocated at 100% of their average monthly purchases directly from Baxter during the March thru August 2017 period.
- The allocation will be made available in four equal weekly amounts.
- Until our inventory assessments are completed, we will not be able to approve any requests for increase, exception or new allocation.

We regret this disruption to your daily operations and appreciate your patience as we reestablish our supply pipeline. For order-related questions, please contact Baxter's Center for Service at 1-888-229-0001. For clinical questions, please contact Baxter's Medical Information at 1-800-422-2751.

Again, we appreciate your patience and support as we work through this difficult situation together.

Regards,

Dennis A. Vaughn
